Creating safe environments

How can GBSG protect your caravan, leisure or camping and glamping park?

GBSG offer security, fire, intruder, access systems and monitoring, all tailored to you. With over 35 years' experience, we use our knowledge to provide you with the best solution to meet the needs of your enterprise.

What do GBSG offer?

Innovation, understanding of standards and insurance requirements as well as highly-trained employees mean that we can offer systems that truly meet the needs of your enterprise. We use our knowledge and talk with our customers to really establish the risks that you face and then offer you a solution. Your system will be tailored to you with in-built flexibility that can also grow as you develop your business.

We look after a number of leisure and caravan parks and have used our expertise to ensure we have effective and responsive solutions.

Quality assured

We are independently assessed by the UK's leading security and fire safety bodies, including the NSI, SIA, BSIA and BAFE®; so all of our surveys, installs and monitoring and maintenance are delivered to the highest standards. Our achievement of ISO 9001:2015 recognises our commitment to customer quality and care.

How do we meet your needs?

One of our surveyors will review your site or buildings with you and talk about the best way to offer you the protection that you need. With a variety of different options available we will establish what will work for you and then install the right solution. We then look at how to maintain and care for your system in the future; delivering excellent customer service at every touch-point.

Complete security

We deal with every aspect from: site survey, product specification, installation and instruction on how to use and get the best from your system. We will then maintain and service your system as well as being able to offer monitoring solutions that can give you even more peace of mind.

We pride ourselves on being innovative and finding the right solution, so we welcome new challenges that give us the opportunity to work with our customers to achieve the desired result.

CCTV

CCTV can be used to protect both the exterior and interior of your property, including the perimeter and points of access. We've effectively installed CCTV to help prevent vandalism, arson and theft as well as helping with anti-social behaviour. With our own monitoring station, we are able to offer a police response service. CCTV can also be stored and used locally and accessed by employees on site.

Fire detection and alarm systems

Fire detection and alarm systems are essential for any sites with public buildings or accommodation. We install, service, maintain and can also monitor fire detection and alarms to meet the BS5839-1:2017 adapted to the BAFE® adopted SP203-1 scheme. We understand your insurance requirements so that we can specify a system that suits your needs and gives you the maximum coverage and at the same time ensures you can secure your entire site.

Intruder alarms

Intruder alarms provide a visual as well as an active warning. We are an NSI Gold approved security provider and we work in accordance with Security Standards: PD 662:2017 and DD263. All of our systems meet the standards of the National Police Chiefs' Council (NPCC). We design, install and maintain our systems to meet the specific needs of your business and site, which decreases your level of risk.

Access control including barriers & gates

The use of barriers and gates can help restrict access to certain areas and our access control can be configured in a variety of ways, which means you can really make it work for you. You can vary access for certain times of the day and restrict access for particular people or to particular areas. You can also have a variety of different set-ups for staff and something different for visitors. By understanding your site, access control can help create freedom of movement whilst restricting access for unauthorised personnel. Our access control works in conjunction with our fire alarms to ensure a fast evacuation of the site, should an incident occur.

Securing Fantasy Island

Located in the busy seaside town of Ingoldmells, Fantasy Island Resort is the East coast's premier family entertainment complex. Combining an action-packed theme park, a show-bar, eateries and Europe's largest 7-day market, the resort's management have an over-riding need to protect public safety and security.

System details

GBSG have provided site security systems to the resort for a number of years, and as the business grew we were able to extend CCTV coverage to include two local caravan parks that they also operate. To help with further CCTV expansion, the most recent CCTV additions have been IP cameras drawing upon security technology advances to allow for enhanced resolution, enhanced scalability and enhanced flexibility. One of the clear advantages of IP cameras is the flexibility to integrate with a wireless network, meaning that's its virtually unlimited with regards to expansion. Like the Analogue cameras previously installed on the main resort, these IP cameras are enclosed in vandal proof casing.

On the main resort, the CCTV surveillance system consists of both dome and bullet cameras. The dome cameras are generally located in high footfall areas where the public's security is at greater risk. The reason for this is that dome cameras tend to provide a greater field of vision and enable high speed panning and ease of control by the on-site security office. Plus, the classic "smoked" dome cameras offer an additional degree of surveillance as it's difficult for someone to tell which direction the dome is actually aiming.

All site CCTV cameras are integrated with movement detection systems. The configuration of any detection system is to enable the cameras to see movement and allow the transmission and recording device to produce good quality and meaningful images.

The live and recorded footage is transmitted to the resort's on-site security office, for which we have supplied all control room equipment.

Interested to find out how we can help you, visit www.gbsg.co.uk to find out more. You can call us on **01775 821100** or email sales@gbsg.co.uk where our friendly team can talk to you about your requirements and book you in for a **FREE** site survey and no obligation quote.
