### Access Control, Barriers & Gates

We know that vehicle theft is a big problem for farms and a fundamental element of any farm security solution is the control of access to yards and outbuildings. Our electronic gates, barriers and doors help to prevent unauthorised access.

### CCTV Cameras

Using surveillance to deter theft as well as helping to capture intruders is also a popular measure. With fixed CCTV cameras, opportunist theft, vandalism and fly tipping is discouraged.

### Intruder Alarms and Fire Detection

We can also protect your home from intruders and fire. These solutions can be integrated into one easily managed system and as part of our home solution our alerts can help keep your property safe, even if you are away.

### GBSG Pulse

You can get even more with the GBSG Pulse®, which gives you tailored reports and security alerts, offering a cost-effective monitored solution. To find out more visit: [www.gbsg.co.uk/pulse](http://www.gbsg.co.uk/pulse)

If the area in which surveillance is needed is not supported by a power source or broadband, then we can design a wireless CCTV system, with a built-in power source and image transmission by GPRS.
